

BioVision's CRISPR-Cas9 Products

The Clustered Regularly Interspaced Short Palindromic Repeats (CRISPR)-Cas9 (CRISPR associated protein 9) system is the latest RNA-guided, endonuclease tool in genome editing which allows for very specific genomic disruption and replacement. Cas9 protein of the CRISPR-Cas9 system is an RNA-guided DNA endonuclease enzyme that forms a very stable ribonucleoprotein (RNP) complex with the guide RNA (sgRNA) and unwinds the genomic DNA duplex. This leads to a disruption in the open reading frame of the targeted gene. **BioVision offers a wide range of highly pure and effective Recombinant Cas9 Proteins, Antibodies, Homology Directed Repair (HDR) Blockers and Enhancers for Genome Editing Studies using CRISPR/Cas9 Technology.**

Applications:

- RNA-Guided Genome Editing
- Gene Regulation

Product Highlights:

- Highly Pure, Maximum Efficiency and Ready-To-Use Cas9 Proteins
- Fast, Affordable and Reduced Cell Toxicity using CRISPR/Cas9 Products
- Higher Insertion/Deletion Frequencies using Cas9 Proteins than with Plasmid or mRNA Encoded Cas9
- Minimal Off-Target Cleavage, and Validated Activity of Cas9 Products
- Validated and Optimized Cas9 Antibodies
- Many Small Molecules (HDR Blockers or Enhancers to choose from) Modulating CRISPR Genome Editing
